HTML

Hyper Text Markup Language

HTML is the code that is used to structure a web page and its content.

The component used to design the structure of websites are called **HTML tags.**

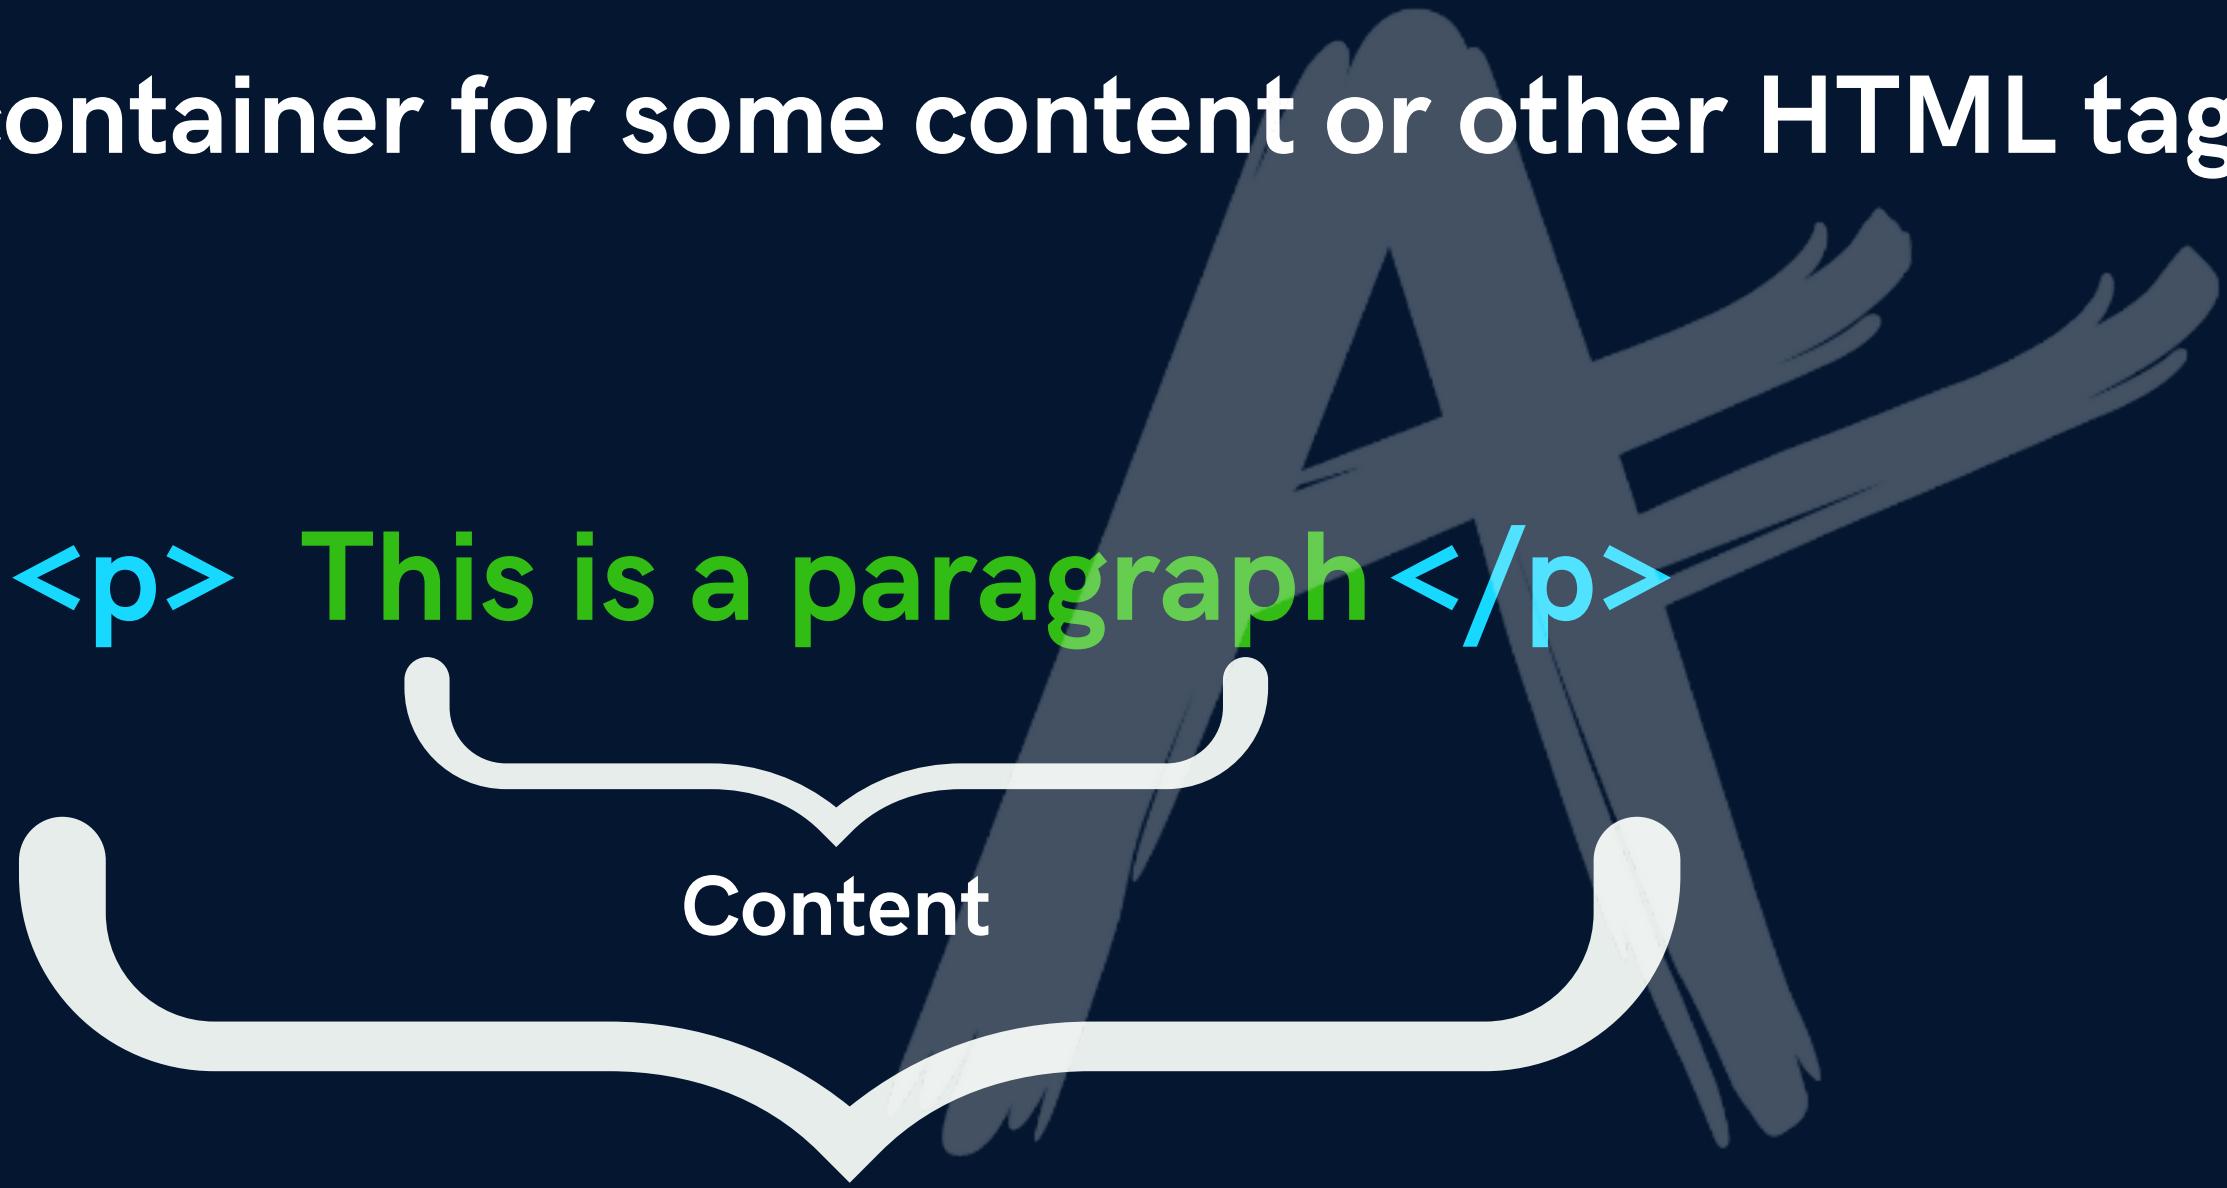

First HTML File

index.html

It is the default name for a website's **homepage**

HTML Tag

A container for some content or other HTML tags

The diagram illustrates the structure of an HTML tag. It features a dark blue background with a faint, stylized white outline of a person's head and shoulders. A large, white, wavy bracket is positioned over the text, highlighting its structure. The text itself is a code snippet: '<p> This is a paragraph </p>'. The word 'Content' is written in white at the top of the bracket, and 'Element' is written in white at the bottom. The entire image has a subtle shadow effect.

```
<p> This is a paragraph </p>
```

Content

Element

Basic HTML Page

```
<!DOCTYPE html>
```

tells browser you are using HTML5

```
<html>
```

root of an html document

```
<head>
```

container for metadata

```
    <title>My First Page</title>
```

page title

```
</head>
```

contains all data rendered by the browser

```
<body>
```

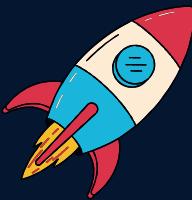

paragraph tag

```
    <p>hello world</p>
```

```
</body>
```

```
</html>
```

Quick Points

Html tag is parent of head & body tag

**Most of html elements have opening & closing tags
with content in between**

**Some tags have no content in between, eg -
**

We can use inspect element/view page source to edit html

Comments in HTML

This is part of code that should not be parsed.

<!-- This is an HTML Comment -->

HTML is NOT case sensitive

`<html> = <HTML>`

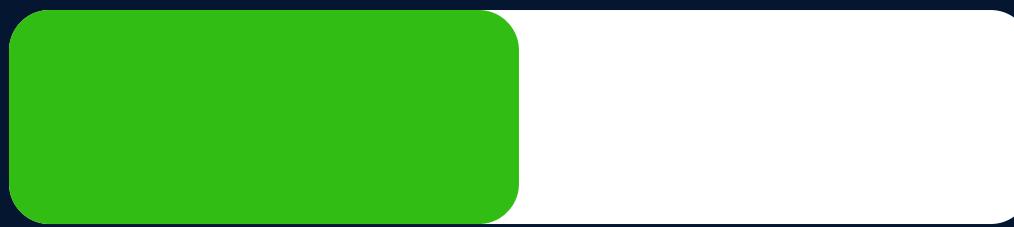

`<p> = <P>`

`<head> = <HEAD>`

`<body> = <BODY>`
