What is Topical Carboxytherapy?

Carboxytherapy uses carbon dioxide (CO_2), a gas your body naturally produces and exhales, to help revitalize skin.

CO_2 can help increase local blood flow. Higher local CO_2 levels also help hemoglobin—the protein in red blood cells that carries oxygen—release oxygen to nearby tissue. This effect of CO_2 on oxygen release is known as **the Bohr effect**.

Carboxytherapy was once given only by injection. **CO2Lift® Pro** is a topical gel that generates CO_2 when its two components are mixed, bringing topical carboxytherapy to your skin without needles.

CARBOXIFY™

Your Surgical Journey

Topical carboxytherapy to prepare, support and maintain your skin before, during, and after surgery.

Why Skin and Oxygen Matter in Surgery

Your surgeon shapes the results. Your skin shows them.

Your surgeon guides every stage of your surgical journey. **CO2Lift® Pro** brings topical carboxytherapy into that care to support hydration, elasticity, and overall skin quality. It complements the care plan your surgeon already trusts.

It can be part of face and body procedures, with a separate option for intimate procedures.

Why oxygen matters

Oxygen plays an important role in healing after surgery. Your skin uses oxygen to produce the energy needed for repair and to help form and mature collagen—the structural protein that helps give healing tissue strength.

What the data show

26%
improvement in skin elasticity[1]*

117%
increase in skin hydration over baseline[1]*

Visible calming and reduced redness within 24 hours after a skin procedure[2]†

[1] Draelos & Shamban, J Cosmet Dermatol, 2023. *After six treatments over four weeks.
[2] Medrano et al., J Drugs Dermatol, 2021. †Reduced redness was observed at the 24-hour assessment in a small pilot study following nanofractional radiofrequency treatment.

Your Surgical Journey

One technology. Every stage of your journey.

Prepare

Your skin is an important part of your surgical journey. Before your procedure, CO2Lift® Pro helps support skin hydration and elasticity as part of your surgeon-directed care plan.

Support

Your skin deserves support throughout your journey. CO2Lift® Pro helps hydrate skin as part of your surgeon-directed care plan. Your surgeon will determine when and where treatments are used during and after your procedure.

Maintain

Monthly treatments, plus daily CO2Lift® Skin Mousse at home, help sustain your skin's hydration, smoothness, and radiance long after recovery.

Your surgeon's plan. Your surgeon's judgment. Support from CO2Lift®.

What to Expect

How it's done

Simply mix the contents of the two packets together until the gel is uniform in color. That's how you know it's ready. Then apply a thick layer to clean, dry skin, leave it on for 45–60 minutes, and peel it away with the stir stick.

How it feels

Most people feel a gentle warmth or tingling while the gel works and may see a temporary pink flush afterward. Sensations vary from person to person. There are no needles, and the treatment itself requires no downtime.

Good to know

- **Professional-grade, from day one.** Your surgical team can apply your first treatment immediately after your procedure, before your dressings go on.
- **Easy at home.** Just mix, apply, and relax. When time's up, peel it away. Your surgeon will give you a plan to follow.
- **Fits into your recovery.** Treatments work alongside your surgeon's care plan, in the office or at home.
- **One kit, every stage.** The same treatment your surgical team uses in the office is the one you continue at home.

Common questions

Can it be used near my incisions?
Yes. CO2Lift® Pro can be applied directly over closed incisions and stitches. The gel firms as it works and peels away gently with the stir stick after 45–60 minutes.

When can I start after surgery?
CO2Lift® Pro can be applied immediately following your procedure. Your surgeon will determine when and where treatments are used.

Does it replace my post-operative care?
No. It complements, but never replaces, the care and instructions your surgeon provides.
